

Well-spreading, slightly acidic cream product for pain in the muscles/joints

フェイタス®クリーム 微香性

Feitas® Cream Slightly fragrant

Transdermal analgesic antiinflammatory agent

Product features/advantages

- Feitas Cream is a percutaneous analgesic antiinflammatory agent with “Felbinac” that has been demonstrated to show excellent antiinflammatory/analgesic effect as the primary ingredient (3%).
- “Felbinac” inhibits the production of a substance involved in pain (prostaglandin) and shows excellent effects on pain in the shoulders, lower back, joints, and muscles.
- Contains 3.0% l-menthol for refreshing feeling of use.
- Slightly acidic, smooth cream product that can be spread well and smoothly. You can easily spread a proper amount on your skin evenly.
- Subtly fragrant product you can use without worrying about the surrounding people.

[Precautions]

 **Do not use:** [Failure to follow directions may result in worsening of current symptoms or cause side effects.]

1. Do not use:

- (1) If you have a history of allergic symptoms to this product or ingredients of this product.
